## Abstract

Actuality of investigation connects natural, public and legislative perceptions peculiarities. That's why nowadays isn't learnt environmental analysis, which must be performed an example of Kvemo Kartli.

Must noted that the environmental estimation isn't defined for now, which is important for its effect.

Actuality of investigation connects purpose and tasks of project. It's noted to learn legislative regulation and geographical originalities determination. In Kvemo Kartli realized and current economical projects also is development of society and social economics. Methodic of investigation connects : on side: influence of national and international regulations. Second side : demands and experiences of European landscapes planning. Third side : analysis of natural and geographical factors.

In that way research of investigation first will be realized :

- 1) Different influence of nature learns of national and international legislative regulations.
- 2) Classifying and definition of geographical originalities.
- 3) Definition of Kvemo Kartli 's natural and comparison analysis.
